[Läs mer](#) [Ok](#) [Learn More](#) If you know the company's well-regarded all-in-one range, you can think of this machine as an all-in-one without the scanner. Most of the other functions you'd expect in a Canon all-in-one are here. It's smaller than some earlier Canon printers, but this means the paper cassette, which fits under the printer, sticks out the front. Although it's obscured by the output tray when you have the front cover down, it looks less sleek when the printer's closed. There's a second paper source, a rear tray brought into play when you fold up the top cover. Canon provides two blacks, one pigmented for strong, black text and one dye-based, to be compatible with the other colours. As you clip each cartridge in place, a red LED indicates it's properly located; it also flashes when ink is getting low. While there are slips added to the manual advising you to load the rear tray only with photo paper and the cassette with plain A4 sheets, the installation routine for printhead alignment insists you load plain paper into the rear tray. Canon claims 12.8ppm and 11.2ppm in best mode for black and colour pages, while we saw 5.45ppm and 4.05ppm in normal print mode, on 5-page test prints. Even on the 20-page job, a lot larger than is typical for home or office documents, the black page speed only went up to 5.

77ppm, still not close to the specified figure. First is the delay between printing first and second sides. To allow for ink drying, the machine halts for around five seconds at the end of printing the first side, so our 20-sided document took 8mins 14secs to complete, while the single-sided version of the same job took 3mins 28secs, less than half the time. These two factors considerably reduce the advantages of double-sided printing. Black text is crisp and clean, with no visible feathering of the pigmented ink. Colour graphics are also good, with vibrant colours and better registration of black text over colour than we saw on the PIXMA iP4500. Doing the maths gives a black text cost of 2.57p and a colour page cost of 6.11p. These are both higher than from the PIXMA iP4500, the next model down Canon's range, and are not particularly good against many of its rivals. The restriction on paper trays and the associated confusion in its firmware look to us like problems that have come to light since launch. Duplex print is slow and not as black as single-sided, making it only really suitable for internal documents. We use industry standard tests in order to compare features properly.
