In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Please try your search again later.The Canon BU10 Bluetooth Adapter enables the Canon i80 and i90 mobile printers to receive wireless transmissions from popular handheld devices, and allows you to print photos directly from your compatible PDA. The BU10 conceals nicely on the front of the printer under the smokegray cover.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. White Doberman 5.0 out of 5 stars They also tried to convince my any other bluetooth adapter would work.

Fortunately I didnt listen to them. Ignorant sales people. This adapter is expensive, so is the printer, but it works perfectly. It also slips into a discrete connector near the front of the unit. It does not stick out of a side or other area. Seamlessly integrated. It also works from over 300 feet away from my Mac Pro workstation. Print times are fast as well. The only interference has been when my dehumidifier has been between the two. No clue why. Expensive but worth it.I think Canon should have included bluetooth with the iP90v printer that I bought, but hey, theyve got to make money too. Just like other reviewers have stated, there is no documentation on how to insert it into the printer. I had to do research on Canons site to find out how. But basically it goes inside a slot inside the front, left side of the printer if the printer is facing you. You might need to open the top cover of the printer to ensure its properly inserted. Good luck!I was a little hesitant due to the price which I thought was kind of high. It turns out this is a pretty slick device that fits into a hidden compartment in the printer. I recently took a trip and set up the printer and laptop in different areas in my hotel room. With the BU10 Bluetooth Adapter installed it printed as if I were connected with a USB cable.I

was trying it on a Mac Mini with no Internet connection. When the printer which is really excellent prints out text it also prints out extraneous characters when using Bluetooth. I am going to try it on another Mini with Internet access and see what happens. I really wonder why Canons manual is just not detailed enough. Of course, it may be me. The BU10 attachment makes a great printer even better. Its wonderful to be able to stick this printer anywhere and print wirelessly. It is extremely convenient. Expensive but worth the cost, in my opinion. One of my niftiest gadgets, and love showing it off to others.

Can bring the printer with the laptop to clients to print out documents, also prints excellent photos on plain paper, and is FAST with the BT. Highly recommended. It works very well and it is one less cable I have to hook up. I really like being able to put the printer out of the way and not have it in my work area.
