Canon

Unfortunately, there is no way you'll get top notch sound from a compact camcorder, no matter how much you paid for it. This isn't a matter of a design flaw; it has to do with the physics of sound a directional microphone needs to be long; for best sound the microphone needs to be physically separated from the body of the camera; finally, some kind of muffle is needed to prevent wind and breath from interfering with sound. Canon's DM100 is designed to achieve all of these things for the sound of the Vixia line camcorders, without overwhelming the simplicity and ease of a compact camcorder. I'm very happy with it. It plugs in directly to the mini advanced shoe on the Vixia camcorders. When it is plugged in it automatically becomes the mike for recordings no need to fiddle with settings. Importantly, it is small enough that it doesn't overwhelm the compact size of the Vixia camcorders. There are three basic settings shotgun for focusing sound capture to sounds directly in front of the microphone, 90 degrees and 120 degrees. I also used the HF10 no mike attached to shoot me shooting with the HFS10 with the DM100 mike attached, then I synched up the sound so I could alternate between the sound with and without the mike. For the purposes of shooting myself in my front yard, I didn't think the directional settings would be useful, so I left it on the DM100 on the 90 degree setting the whole time. I also didn't think there would be any good way to give a real sense for the quality of the sound via this quick and dirty video review but the look of the mike and the wind elimination are obvious. Note that the video starts out with the sound from the onboard mike of the VIXIA HF10, and then I indicate with cool flashing text when I'm recording with the DM100 MIKE ON! or with the HF10 onboard mike MIKE OFF!.

You should note that it's not just wind noise you hear when I'm recording with the on board camera, there's also just a low system hum that is almost completely eliminated when recording the the DM100. I know the video is quick but I prefer to put most of my review in the text and think of the video as merely an illustration if you want to look more closely at the pictures, just pause and gander all you like. FINAL WORD If you care at all about sound, and especially if you will ever shoot outdoors, you probably need some kind of external mike for your Vixia camcorder. There are better microphones than this one, and even cheaper ones; but you have to remember that if you buy another mike you'll also need some kind of adapter if you want it to mount on top of your Vixia, and it won't power directly through the Vixia, plus you'll have a wire hanging around that plugs into the external mike input mini plug. For most nonprofessional and semiprofessional situations, the DM100 will give you the sound you need, is easy to use with the Canon Vixia camcorders, and looks good on top of your camera. Reviewed in the United States on August 6, 2014 This is an initial reaction with very little use, yet. My tests indicate that it works as advertised, more or less as described in other reviews. So I hope to be careful with it and will try to avoid putting excessive force on it. It is definitely a big advantage to have a device that connects through the camera shoe, needs no

batteries of its own, needs no connecting cable, and need not be turned on to work. You only need to choose the type of pickup angle you want. And I agree with another reviewer who complained that it does not come with a protective case. For now, i am keeping it in a thick sock, which I hope will protect it to some extent. Please try again later. Peggylynn 5.0 out of 5 stars Have been told it can be used with an adapter on other cameras. But with Canon it makes a great package. Works as described and wasnt disappointed.

<https://www.interactivelearnings.com/forum/selenium-using-c/topic/14461/bosch-hds7052u-manual>

I shoot mostly wildlife movies and it picked up all the sounds I wanted to hear. From behind the microphone its ability to reduce unwanted sounds like my breathing works very well. With 2 settings for angle capture and the long distance shotgun mode I am quite happy with it. Some reviewers found the minishoe to be weak. I didnt think that was an issue. Like any good camera gear care needs to be taken and I didnt find this issue to be a problem for me. Please try again later. Please try again later. David A. Bryant 3.0 out of 5 stars My tests indicate that it works as advertised, more or less as described in other reviews. So I hope to be careful with it and will try to avoid putting excessive force on ti. For now, i am keeping it in a thick sock, which I hope will protect it to some extent. Please try again later. Please try again later. John 5.0 out of 5 stars When I install it, on the camcorder, there is a little icon that comes on the screen to show that it is installed. Stereo sound is great. When I listen to my recording with headphones, I can hear everything as if it were live. Background sounds, sound like they are behind you and objects moving from left to right, or right to left sound just like there were live. The wind screen is quite a conversation piece. Everyone wants to know what I have mounted to my camcorder. Looks like a cat, squirrel, raccoon, etc. Works great unless it is really windy, then the wind sound is still somewhat annoying. But if I take it off and try it, you can see that it really does help. I would recommend this to others, as it really has great quality sound and does cut down significantly on the wind sound. Please try again later. Please try again later. HMMWV 5.0 out of 5 stars I was impressed that it had variable stereo patterns or shotgun options, it came complete with the dead cat cover, and it worked with canons DV miniS shoe.

<https://findatree.com/images/bsa-airgun-manuals.pdf>

Having clear sound at a distance usually means an RF remote lav mic along with an on camera mixer but for 610 foot shoots that seems like a lot of work. That's the sweet spot on the shotgun mic. Since the miniS cams are digital to begin with there is no problem with mechanism noise being picked up. Please try again later. Please try again later. customer 4.0 out of 5 stars I performed fairly exhaustive testing with multiple audio sources, indoors and out, with the various onboard mic settings turned on and off, with and without windshields, and even analysis of waveforms from test recordings. The only camera setting I changed from default was the automatic level control of audio both manual and auto were tested. The DM100 was the only mic tested that has a stereo setting all the other mics are mono only but the DM100 was only tested in the shotgun and therefore mono setting. I compensated for the differing recording volume levels of each mic. The mics were all mounted to the camera using the available metal hotshoe adaptor to fit the mics without the proprietary Canon miniadvanced shoe. The DM100 overall was the better mic for my application recording human voices both indoors and outside. The Sennheiser the smallest mic tested was missing bass frequency but very good at recording high frequencies crisp and clear. The Azden was very muddy and bass heavy, besides being the biggest mic tested it had the worst sound of those tested. The Rode was a bit bass heavy with the highs somewhat truncated, but overall a good sound. The DM100 has a balanced sound and was the best of the mics tested at reducing wind noise. The Azden and the Rode seemed to be a bit more sensitive to picking up bumps to the camera or tripod and even nearby footsteps probably owing to their bass sensitive frequency response. The Rode shock mount orings came undone a few times during testing.

<https://www.flexcable.com/images/bs1704-manual.pdf>

The DM100 had shotgun selectivity at least as good as the other mics ie rejecting sounds not in front of the camera. Downsides to the DM100 are the slightly lower sound level recorded compared to the others and the delicate looking proprietary junction. An upside to the DM100 is that it has no power switch unlike all the others tested which all have power switches and it is easy to forget to turn those power switches off, besides being a bit of a chore. The DM100 runs off of camera battery power which I prefer. Another minor downside is that the DM100 cannot be remote mounted due to the mini advanced hotshoe connection all the other mics could in principle be attached with a longer cable to allow for use as a remote mic. Of course this also means that the DM100 has no cable to get snagged. The DM100 is also compact in size listed from small to big Sennheiser, DM100, Rode, Azden Note that during each test I included the Canon Vixia HF G10 onboard camera mic. The onboard mic has fairly balanced sound perhaps a bit thin and tinny but is poor at rejecting wind noise. The onboard mic is totally omnidirectional and so picks up sound from anywhere and everywhere all of the shotgun mics tested were indeed at least somewhat effective at isolating sound recorded to the area towards the front of the camera. I went into this shootout thinking that the Canon DM100 would be outperformed by the other mics but I was proven wrong. Overall the DM100 wins, the Sennheiser and Rode tie for second place, and the Azden comes in third. Please try again later. Please try again later. Video Guy 5.0 out of 5 stars I tested it in a few videos and you can tell the difference between the modes while youre recording. The recorded sound quality is amazing! Please try again later. Please try again later. carevalo 5.0 out of 5 stars Sound will be vastly improved! The quality is very high and the experience of my video footage has vastly improved after I installed this little and convenient device.

Extremely satisfied! Please try again later. Please try again later. S. O. Coutant 5.0 out of 5 stars It fits the new Canon HF10 and HF100 customized hot shoe, making those hidedef cameras that much more effective and professional. Okay, semipro. But I like the results. The cameras have builtin stereo mics that work well, but are sensitive to the slightest breeze, which sounds like thunder. This external mic solves the wind noise problem, plus the switchable polar patterns and superb frequency response add depth and dimension not possible with the oncamera mic. Thank you, Canon, for a job well done. Please try again later. Please try again later. CharlieSeymourJr 5.0 out of 5 stars It slides into the Mini Shoe in the back top of the camera and is powered by the cameras battery. VERY happy with the sound quality. OK. so its not my studio mic, but when Im out and need to capture people and what they say, this is terrific. And small easily tucks inside my camera case for when I need it. That way, I can carry it with me all the time and never worry if I have it. And SO much better than just the oncamera mics. Stereo and shotgun. Nice addition to my videoproducing arsenal. Charlie Seymour Jr Please try again later. Please try again later. D. A. Murrow 5.0 out of 5 stars Its a fact. If you want to put it in your pocket, it cant have a good mic. The Canon HF series is no different. I bought this with my I WAS WRONG. Wow, the upgrade in audio is enormous. Ive been able to shoot talking heads and interviews, both indoors and on the street. The wind sock is worth just leaving on. If Im shooting without the DM100, I know my footage will be picture only when it reaches the cutting room. This makes the audio manageable. Ive been able to put it in Spare yourself the pain of showing everyone the footage from your new HD camera, completely with terrible audio.

DM100, buy it, use it, love it. Please try again later. Please try again later. You may experience shipping delays.

Amazon calculates a products star ratings using a machine learned model instead of a raw data average. The machine learned model takes into account factors including the age of a review, helpfulness votes by customers and whether the reviews are from verified purchases. The picture is stunning and its hard to believe you can get such beautiful images from such a compact camcorder. Unfortunately, there is no way you'll get top notch sound from a compact camcorder, no matter how much you paid for it. For most nonprofessional and semiprofessional situations, the DM100 will give you the sound you need, is easy to use with the Canon Vixia camcorders, and looks good on top of your camera. To get a decent angle requires a certain distance from the stage. The last thing you want is for the builtin camcorder microphones to be recording the dinner conversations closest to the camcorder. For very noisy venues, the shotgun setting picks up sound in a narrow beam like what they use to record end zone conversations at football games. For quieter rooms, the 90 or 120 degree settings will record in stereo. Sound quality is excellent, and it's very easy to use; no wires to attach. Your camcorder monitor display will show a microphone icon when it's active. Keep the included wind muff looks like a rabbit's foot cover on at all times; you never know when you need to record outdoors, where the slightest breeze will ruin the sound of a recording.

It is cable free, and has a selector switch for stereo sound to boot. I'm impressed at what a good job it does. The highs and mids sound great; lows are not wonderful but better than the builtin mic. Usually I record separately with a Zoom H4N, which does a better job of capturing the lows but not as good on the highs so I blend them and the bands are pretty happy with the results. I should admit I have no experience with the Rode shotgun mics. I don't doubt that they're better, but since I knew I'd always be recording separately on the Zoom, I went with the convenience of this mic. So far, it's worked out great; no effort to stick it on the camera and there's not much to think about after I've set the volume manually which I highly recommend. Please try again. Please try again. Listen FREE for 90 days. Learn more here. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Please try your search again later. You can edit your question or post anyway. Choose 90 degrees if your subject is relatively close and narrowly focused; choose 120 degrees when recording a wider or more distant subject such as a sporting event, play, etc. Use the windmuff to reduce noise when recording outdoors. A builtin shockmount in the stem of the DM100 reduces noise. Attaches to advanced accessory shoe on select Canon camcorders. No batteries required. Amazon calculates a product's star ratings using a machine learned model instead of a raw data average. ABOUT THIS VIDEO For this video I only focused on how this mike improves outdoor shooting, and also on showing what the DM100 looks

like on the Vixia camcorders I have the For the purposes of shooting myself in my front yard, I didnt think the directional settings would be useful, so I left it on the DM100 on the 90 degree setting the whole time.
